

Why Placing a Shred Cart or Console in Your Office is the Smart Choice

ON-SITE MOBILE SHREDDING SERVICE

For convenience and security we provide specially designed and lockable 64 gallon security carts or 40 gallon lockable security consoles to keep at your business. A Williams uniformed, bonded and insured shredding specialist will arrive at your office, on time, and will move the locked cart to the truck for 100% compliant and secure on-site shredding. The whole process takes place right in front of your eyes with our trucks even allowing you to view the documents being shred through a camera and viewing station on the truck.

NAID CERTIFIED SHREDDING

Hiring a shredding company with NAID "AAA" Certification is the only way you will know for sure that your documents have been destroyed securely.

WHY DOCUMENT DESTRUCTION?

The FBI maintains that physical documents and records are still the primary cause of most breaches.

That is why having Document Destruction performed by a NAID certified company is so important. It reduces risks and negative impacts on your business such as: identity theft, loss of trade secrets, fraud, negative perception of your business, litigation, fines, and penalties

WIN BACK EMPLOYEE'S TIME

Having a shred console in office takes the hours of labor employees spend shredding, and reduces it to the minutes it takes for the pickup and shredding by a mobile shred truck.

REDUCE COST

Doing multiple document destruction projects a year is not only inefficient, but more costly compared to recurring shred service. Utilizing a destruction schedule helps eliminate costly purge projects.

IMPROVE EFFICIENCY

Not having a procedure for destroying documents is a liability for your business. A shred bin or console aids in showing employees where they should be depositing documents that need to be shredded.

ADDED SECURITY

Waiting for boxes to pile up with sensitive information before shredding is an extreme risk for your business. Shred consoles and carts come with a lock and grant access to only those who have the key.

Protecting the Environment

Not only will you have peace of mind knowing that your sensitive documents are shredded, but you can also rest assured that every document shredded gets recycled to protect our environment.
